

EPOXY ADHESIVE SPECIFICATION

1.0 DESCRIPTION

The epoxy adhesive shall be capable of securing the plastic delineator base to the asphalt or concrete surface. The adhesive shall retain the base with the delineator installed to the road surface during repeated impacts from a typical passenger vehicle.

2.0 GENERAL REQUIREMENTS

The epoxy adhesive shall consist of two equal parts, 5 oz of part A & 5 oz of part B. The mixed epoxy shall be gray in color. The epoxy shall have a working time of approximately 60 – 90 minutes and be fully cured in 24 hours. The recommended application temperature range is 41°F – 104°F [5°C – 40°C]. One 10 oz epoxy kit shall be used to fix one delineator base to the road surface.
