

Glarescreen System

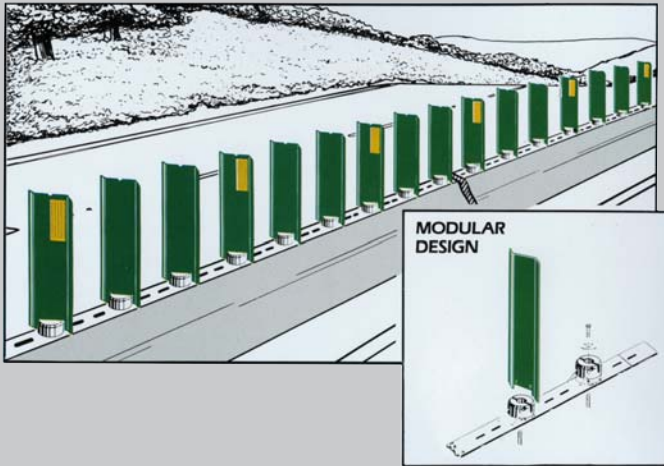

Safe-Hit Glarescreen is a vertical blade delineator system that is used to delineate both temporary and permanent medians. Positioned on the top of median barriers, this system minimizes traffic slow downs in work zone areas. Made of polymeric materials, the blades are flexible and durable, and fit into a specially-designed plastic blade base and base spacer system. The entire system then mounts to the top of median barriers to create a shield for the length of the median. Reflective sheeting may be added to the blades.

Glarescreen Application

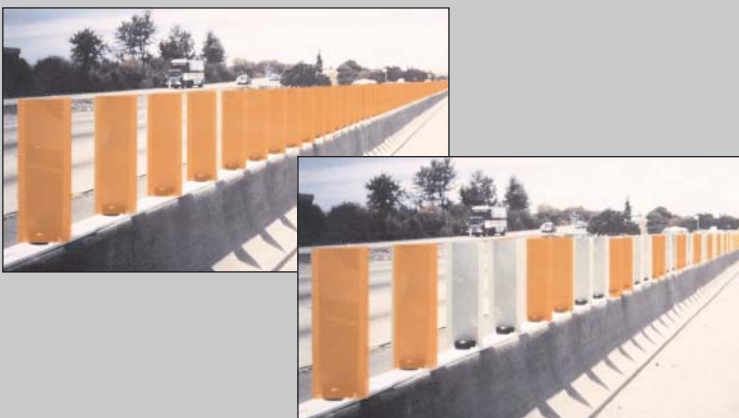

Uniquely designed for safety and modular economics, Safe-Hit's Glarescreen System is the ideal for delineating both temporary and permanent median barriers.

Multipiece Vertical Blade Delineator System

Orange and white glarescreens are ideal for highlighting workzones

- Available in Green, Orange and White.
- 24" (609.6mm) and 30" (762mm) standard height (custom heights available).
- Reduces traffic jams in work zones by limiting cross-median visibility.
- Barrier wall can be relocated without removing the glare screen.
- Adapts to any size barrier, temporary or permanent.
- MODULAR
- Fast, easy installation and replacement.
- Safe, durable, high-impact polymer.
- Allows easy access to highway for maintenance or emergency crews.
- Easy repair if needed.
