SNAP-IT™ & WRAP-IT™ REFLECTORS

Safe-Hit Snap-It and Wrap-It products are unique reflectors that attach with ease to practically any post or similar type product that needs quick and significant visual enhancement.

SAFE HIT
Snap-It
Reflector

Snap-It and Wrap-It reflectors are exceptional at highlighting signs that may be partially obstructed by tree branches or other visual barriers. For delineator applications not requiring a rebounding post, use Snap-It on U-Channel posts instead of button reflectors for a more durable reflector with a much larger reflective surface area.

- Easiest and quickest installation of visibility enhancement reflectors: No need for specialty fasteners and tools. The Snap-It model literally snaps around most post types (especially U-Channel type posts). The Wrap-It is ideal for odd shaped, large posts or even small trees!
- Full 360° visibility with one piece design.
- Made from the same durable plastic material as Safe-Hit's reboundable delineators. No more rusted and dented metal reflector devices.
- Colored Snap-It material appears uniform and provides daytime visibility on Snap-Its that are minimally reflectorized.
- Hardware fastener kits available.
