## DRIVE SHANKS & DRIVE ADAPTORS

---

### USE RECOMMENDATIONS

The following information is important to the longevity of Drive Shanks & Adaptors as well as keeping the tops of all anchors from deforming during installation.

1. Safe-Hit Power Drive Shanks & Drive Adaptors are to be used only with the appropriate power equipment.
2. Never put a side load on Power Hammers for replumbing an anchor, while the hammer is in operation. If necessary, it is permissible to pry sideways slightly for straightening, but only after stopping the pounding action of the hammer.
3. Hold the anchor in a vertical position with boot or hand before engaging hammer again. Avoid angle impacts or horizontal impacts for the purpose of replumbing an anchor.
4. All piston or cylinder type hammers, such as as, Rhino, Fairmont and Stanley, have a receiver portion under the piston with definite dimensions. Only drive adaptors specifically designed for that hammer can be used. A sloppy fit will usually result in the destruction of the drive shanks & adaptors.
