

# Dura-Post™ Soil Anchor Installation Instructions

Caution: Always wear protective clothing and personal protective equipment (PPE) such as eye protection, work gloves, and steel toe work boots while doing the following work.

1. Check that you have all parts and tools necessary for the installation. You should have post(s) and soil mount base(s) with one bolt and one lock nut for each. You should also have a Dura-Post™ drive tool.

2. Determine the anchor location(s).
3. Position an anchor so that when installed, the bolt will be perpendicular to the traffic direction.
4. Keep the anchor vertically plumb when driving it into the ground. This will insure that the installed post will be vertically straight.
5. Drive the anchor until the holes are 1/4" above the ground.

6. Insert post and align hole in post with holes in anchor. Use bolt and lock nut to secure the post to the anchor.
