

SIGN POST SPECIFICATION

1.0 DESCRIPTION

The sign post shall consist of a flexible, tubular post made from a durable non-discoloring thermoplastic material with integral hardware for mounting flexible signs. The post shall insert and lock (dependent on how ordered) into either a surface mount base for pavement or asphalt surface applications or a driveable metal anchor for soil mounting applications. The posts are to be of a size and have locking mechanisms compatible with the bases or anchors in service. Posts that are not compatible will be rejected for use.

2.0 GENERAL REQUIREMENTS

The post shall be tubular in shape and two and one-quarter (2 1/4) inches in diameter. A one and three quarter (1 3/4) inch diameter interior reinforcement tube shall be located and secured in the lower portion of the post. The total above ground height of the post shall be delivered as required. The post shall be available in the following colors and resistant to ultraviolet and infrared radiation: White, Yellow, Blue, Green, Red, Orange, Gray, Brown and Black. The Sign Post shall be equipped with integral mounting hardware and fasteners for the attachment of a plastic signage.
